

Estimated Average Flow Time

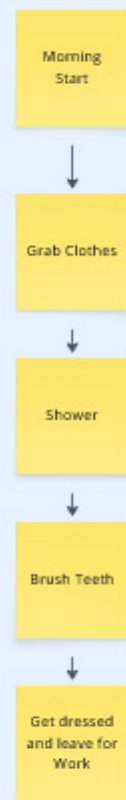

Early Morning - 60 mins
Work Prep - 90 mins
Dinner - 120 mins
Chores - 120 Mins
Bed Prep - 60 mins

Dot voting

Estimated Cycle Time: 7.5 hours

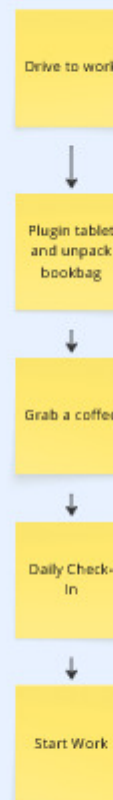

Early Morning

Optimizing Morning Routine:

Eliminating Waste - I can reduce a lot of time in the mornings if I instead choose to prep for work the night before which includes setting out my clothes which can reduce 5 minutes.

Work Prep

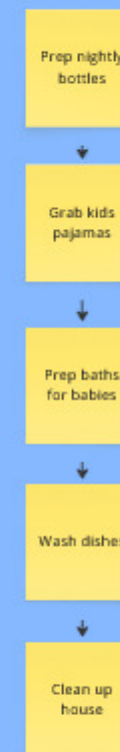

Dinner

Optimizing Dinner Routine:

Eliminating Waste - Depending on what needs taken care of when I arrive home, the amount of waste could fluctuate dramatically as well as what is for dinner. I can reduce a significant amount of time if any prep can be done the night before (setting out ingredients etc)

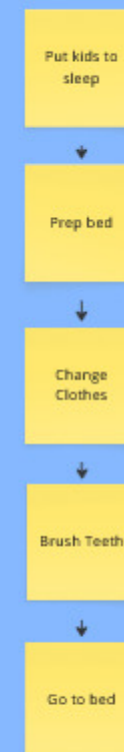

Chores

Optimizing Chore Routine:

Eliminating Waste - Time here can be reduced when it comes to a lot of the prep work. Setting out the kids clothes while dinner is cooking and preparing the nightly bottles can reduce 15 minutes at most.

Bed Prep

Optimizing Bed Prep Routine:

Eliminating Waste - I don't see a lot of waste here but similarly to the chore routine, I can bake the time it takes to prep the bed and change clothes into the chore routine, so that way I can get to bed quicker.
